

Report
On
Review of e-Repositories

HEaL Institute of Training, Research and Advocacy
Forum for Medical Ethics Society, Mumbai

Introduction:

This report has been published under FMES's initiative to create a systematically organised repository of material on medical, healthcare ethics and bioethics in the form of books, guidelines, manuals, case studies as well as papers from other journals as part of the ongoing effort for awareness and consciousness building. FMES is probably the only organization in India which has been working on bioethics in a concerted way. Over the last two decades FMES has developed extensive scholarship in these areas to inform policies, programs and law towards making them people-oriented. It has also developed and sustained a network of committed healthcare professionals, social scientists, ethicists and critical thinkers who have been working in the field of bioethics locally and globally. It serves as a virtual think-tank which addresses issues in health and allied themes which impact people's lives. However, we see a major gap in the form of non-availability of robust resources in bioethics focused on India. Such resources are available in other countries both developed and developing. In the coming years, FMES sees itself taking on the role of building and hosting an e-knowledge hub and an e-dissemination house for national and international material and resources related to bioethics, in a comprehensive manner. There is a dire need for India-specific material for training and educational purposes. In fact, the absence of such material is deterring the growth of bioethics training activities in India. The purpose of this report is to review the existing repository models used in bioethics and other disciplines to get deeper insights into the content, operational approaches, digital platform designs and cost efficiency measures used.

Method:

We used the 'Google' search engine and searched the online available curricula using combination of keywords- e-repository, repository, India, bioethics, ethics etc. Apart from web search, team members also suggested names of some of the institutes who have their e-repositories. We listed down some those searched e-repositories and visited those websites to explore the basic information, content, operational approaches, digital platform design and cost efficiency measures. In overall we did analyze seven e-repositories.

1) Bioethics Syllabus Exchange Repository:

url: <https://repository.library.georgetown.edu/handle/10822/556197>

This is the repository of syllabi of bioethics courses with an objective to promote the study of bioethics. The collection consists of over 600 syllabi in three languages from twelve countries. The collection contains syllabi of courses from high school till graduate education. The Library continues to add bioethics syllabi to the repository on a rolling basis. The portal accepts syllabi from current or former course offerings using the form at the bottom of their webpage. The uploaded syllabus is then reviewed

by library staff and appropriate syllabi are shared with the public. The syllabi are in pdf format and openly accessible.

The screenshot shows the homepage of the Bioethics Syllabus Exchange Repository. At the top, there are logos for Georgetown University, DigitalGeorgetown, and the Bioethics Research Library. A navigation breadcrumb trail reads: DigitalGeorgetown Home / Bioethics Research Library of the Kennedy Institute of Ethics / Publications and Materials of the Bioethics Research Library / Bioethics Syllabus Exchange Repository. The main heading is "Bioethics Syllabus Exchange Repository". Below this, there are "BROWSE BY" options: Creators, Titles, and By Creation Date. A search box is present with the text "Search within this collection:" and a "Search" button. To the right, there is a "Search" box with a magnifying glass icon and radio button options for "Search DigitalGeorgetown" (selected) and "This Collection". Below the search options is a "BROWSE" section with a dark blue header "All of DigitalGeorgetown" and a list of categories: Communities & Collections, Creators, Titles, and By Creation Date. Underneath, there is a "This Collection" section with a dark blue header and a list of categories: Creators, Titles, and By Creation Date. At the bottom right, there is a "MY ACCOUNT" link. The main content area features a description of the repository: "Descriptions of bioethics syllabi for semester-length classes, seminars and continuing education courses from high school through graduate education." Below this is a section titled "About the Collection" with a paragraph of text and a photograph of a group of people in a meeting. The text states: "Since 1985, the Syllabus Exchange Repository at the Bioethics Research Library has functioned as a clearinghouse for bioethics syllabi to promote the study of bioethics as a discipline. The collection consists of over 600 syllabi in 3 languages from 12 countries. While the standard syllabus documents a semester-length class, seminars and continuing education courses are included as well. The collection contains courses from high school through graduate education. The Library continues to add bioethics syllabi to the Syllabus Exchange Repository. Syllabi submissions can be for current or former course offerings. Please send submissions to: bioethics@georgetown.edu".

At the right hand side top banner, users can start search of the syllabi by keywords. Just below the search box, one can discover browse items by Creators, titles and by creation date. It has a option to search the items in DigitalGeorgetown which is a collection of all the digital resources of University of Georgetown. The members of the digital library can access these resources using credentials provided by the university. The collection of syllabi is open access and users can specifically search into the collection of syllabi by creators, titles, creation dates, Course type/level (High School, Undergraduate, Undergraduate nursing, graduate, graduate medical education, Continuing education, Continuing Medical Education) and subjects sub-classified in alphabetical order e.g. Abortion, Adoption etc. The most recent submissions are always visible on home page. It also has a customized search option. The school level syllabi have mentioned only about different themes in bioethics while higher education syllabi have mentioned essential readings under each subthemes of bioethics. The syllabi contain only detail references of the journal article or book. It does not specify if the article is freely accessible or paid. The downloadable/accessible link to the article also has not been given.

2) ScholarlyCommons, University of Pennsylvania

url: <https://repository.upenn.edu/about.html>

ScholarlyCommons is the University of Pennsylvania's open access institutional repository. It uses Digital Commons, software powered by Bepress. It shares the collection of unique, library created material, distinctive work of Penn faculty, staff and students, Research articles, datasets etc. with global audience. It has included 36,792 papers which have been downloaded by 15 million research scholars. The kinds of resources include papers (papers, reports, Policy Brief, Books/Ebooks, Instructional Materials, working Papers), videos & audios (instructional Videos, MOOCs, interviews, audio), datasets, publications (journals, magazines, newsletters), posters, dissertations, theses, Conference Presentations & Agendas, Symposia, Lecture series, research conference.

The screenshot shows the ScholarlyCommons website. At the top left is the Penn Libraries logo. The main header reads 'SCHOLARLYCOMMONS'. Below the header is a navigation bar with links: 'Collections by Research Unit', 'Journals', 'Thesis/Dissertations', and 'Researcher Profiles'. On the left side, there is a search box with the text 'SEARCH' and 'Enter search terms:'. Below the search box is a dropdown menu with 'in this repository' selected. There are also links for 'Advanced Search' and 'Notify me via email or RSS'. The main content area is titled 'About ScholarlyCommons' and contains several paragraphs of text. The first paragraph describes the repository's purpose and its open access nature. The second paragraph mentions its official launch in early 2005 and its collaboration with the School of Engineering & Applied Science (SEAS). The third paragraph states that it is a service of the University of Pennsylvania Libraries, administered by the Digital Scholarship group. The fourth paragraph notes that it uses Digital Commons software powered by bepress. Below this is a section titled 'Our Mission' which states that the repository showcases and shares work created by the Penn community and offers three core services. The first service listed is '1. Comprehensive permissions review and deposit of previously published materials (Penn faculty only);'.

Students/users need to send their CV and list of publication to be uploaded on the e-repository. The ScholarlyCommons personnel then assists the students/users to determine copyright/permission for every work, contact publisher and post permitted material on ScholarlyCommons. All the resources in ScholarlyCommons are indexed in the search engines like Google and Google Scholar. So the resources listed here are more easily discoverable online and appear high in search results.

On the left side of the webpage, customized search option is located. Below the search option, the web page has tabs such as About (About SC, Services, FAQ, Policies), Submit (submit research, faculty

assisted submission, submission instructions), browse (Collections, Subjects, Authors, Dissertations), authors, copyright and data management guides. On the top of the webpage there are options such as collections by research unit, journals, thesis/dissertation and researcher's profile. The e-repository also offers robust live usage statistics with factors such as most popular, total downloads and geolocation under the tab 'Impact'.

All of the content on this e-repository is freely available and openly accessible to the researchers around the world. In order to do so, they assist authors in finding ways to share their work legally on other platforms. They are also trying to find out alternatives to Bepress/Elsevier under the program called Beprexit and if succeeded it will help in making scholarly work available at free of cost.

3) WHO's Institutional Repository for Information Sharing (IRIS):

url: <http://apps.who.int/iris/>

The Institutional Repository for Information Sharing (IRIS) is the digital library of WHO's published material and technical information in full text produced since 1948. WHO Library in Geneva has released new features for IRIS, the extensive public health DSpace repository, including statistics and automated recommendations. With over 2,00,000 archived items, IRIS offers content from WHO governing bodies, publications, technical documents, guidelines and journal articles. Over the past six months, the repository has served over 19 million downloads. The content is freely accessible and searchable in the six official languages (Arabic, Chinese, English, French, Russian & Spanish).

IRIS offers the user search term and result recommendations, while the user is actively searching. The search engine does not only suggest additional keywords but also highlights actual titles, authors, subjects and publishers, matching the search terms entered by the user so far. When clicked, a preview pane immediately reveals more information about the recommended resource or keyword, enabling fast and efficient content discovery. For accuracy of the results, the search feature has been enhanced in IRIS to provide you with the most relevant results to you search queries. Automated recommendations are available while users are actively typing the keywords in the search box. Advanced search filters are available to refine user's search. Using dropdown menu, users can choose filters to add to their search criteria. It is possible to apply several filters at the same time. For new search, one needs to remove all the filters and start afresh. For the annual reports collections, the more recent ones appear first with the recency boosting. Users can also search within a particular community or collection only. For example, search only in the Headquarters Publication Collection. To search for exact phrases, users can use quotes "keyword" and also can sort by date to see results in chronological order.

IRIS new interface design is similar to WHO website. At the top banner, one can start their search by keywords in the IRIS search box. In the left menu users can discover the communities and collections and browse items by issue date, subject or author. In the left side menu, users can access IRIS statistics and

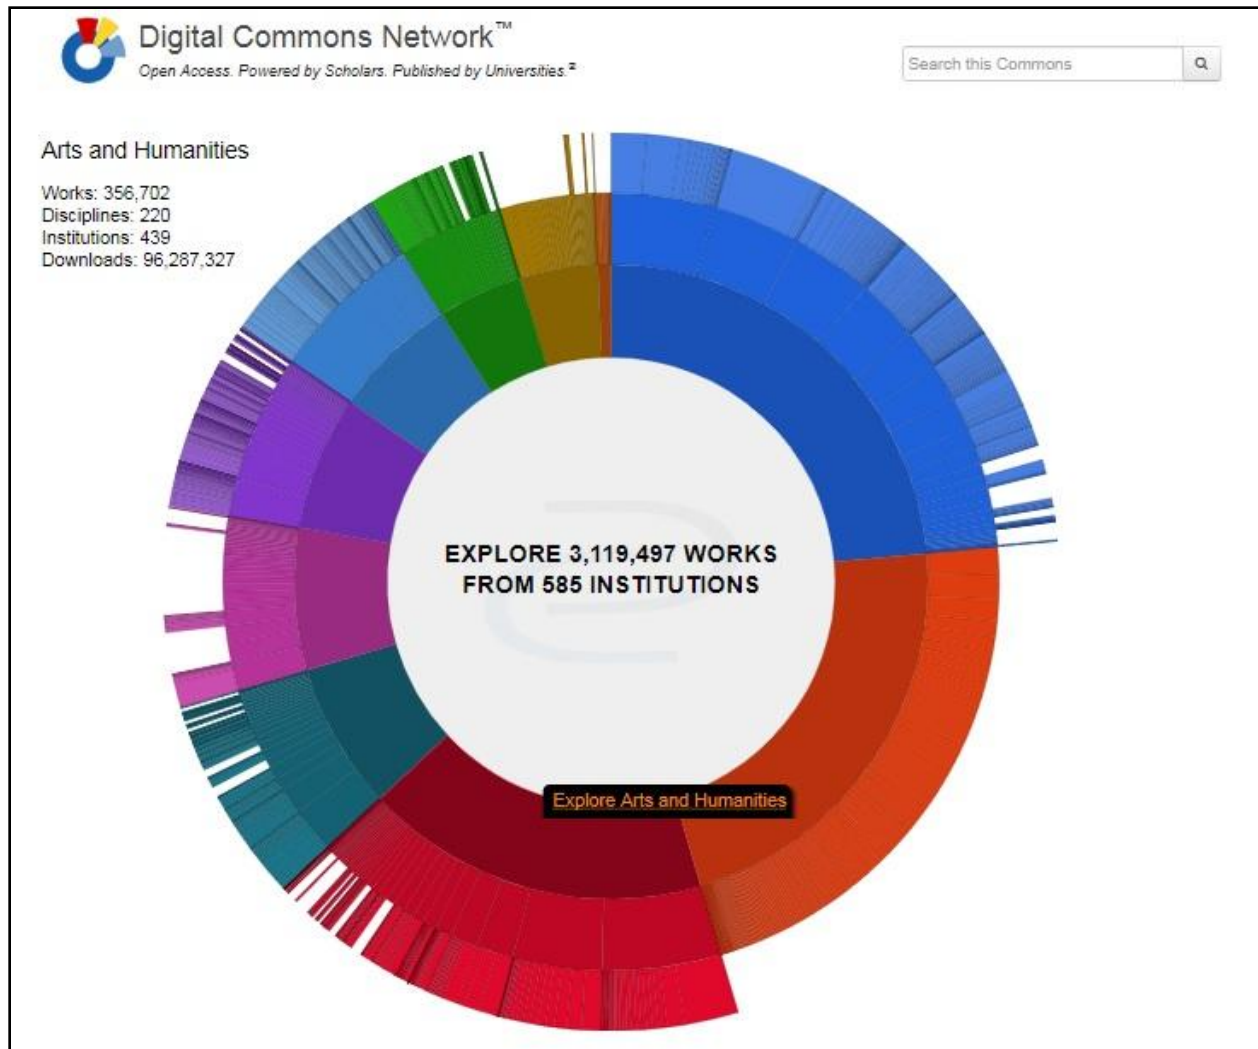

check out the most popular items and statistics by country. At the item level, one can find the detailed description with citation, icons of the license, link to statistics, item permanent link, access the full text of the publication and many more.

IRIS also offers robust usage statistics with most popular, total downloads and geo-location. From the left navigation menu, there are two main points of entry: most popular and by country. The 'most popular' option offers a list of the top downloaded publications. Users can use the dropdown menus to select more results, a collection, limit the selection to a region and change the period of time. The report 'by country' has an interactive world map and it displays a list of top countries using IRIS. Download by countries option is available for resources of January 2017 onwards. The users can zoom and click on a country to see downloads by title of the article. Statistics are available at all levels. For the entire global IRIS, one need to click the link at the bottom: at community level, at collection level, at item level, where they can find different graphs and download for each publication and choose a period of time. Besides usage statistics, IRIS also offers altmetrics score for online attention of a publication.

4) DigitalCommon

url: <http://network.bepress.com/>

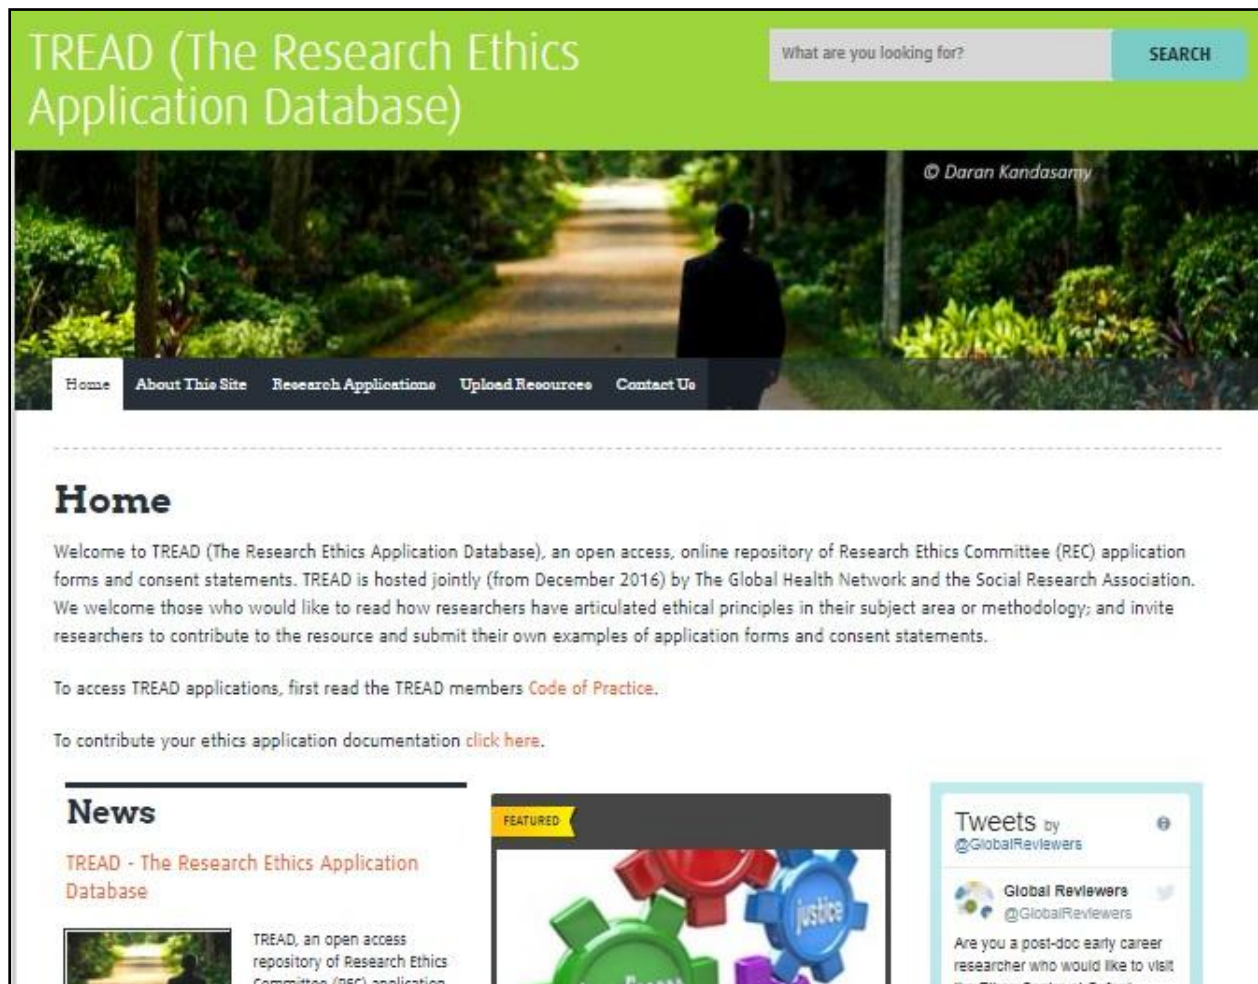

The Digital Commons Network brings together **free, full-text scholarly articles** from hundreds of universities and colleges worldwide. The Network includes a growing collection of peer-reviewed journal articles, book chapters, dissertations, working papers, conference proceedings, and other original scholarly work. It has 24,10,162 research work from 530 institutions across the world. Scholars need to fill one online form along with submission of work they want to upload on DigitalCommon.

It has a multi-colored discipline wheel on front web page. Clicking "Explore" anywhere on the multicolored Discipline Wheel opens a Commons page for a particular academic discipline. From here, users may browse popular and recently added articles, search all content, or "Follow" authors and publications to receive monthly email updates on new work in that field. Apart from this, they have listed different academic disciplines at the bottom of the page. It direct to a window of specific discipline. On that web page, on the left side, different sub-disciplines of that discipline are listed. It has other sections such as popular institutions, popular authors, popular articles and real time world readership map. Users never run into pay walls or empty records, because only full-text, open-access research and scholarship are included in the Network. If the mouse pointer is placed on particular article title, a flash window appears which shows title, author name, abstract and download link to the article.

5) The Research Ethics Application Database (TREAD)

url: <https://tread.tghn.org/>

The screenshot shows the homepage of the TREAD website. At the top, there is a green header with the text "TREAD (The Research Ethics Application Database)" on the left and a search bar on the right with the placeholder text "What are you looking for?" and a "SEARCH" button. Below the header is a large image of a person walking down a path in a forest, with the copyright notice "© Daran Kandasamy" in the top right corner. A navigation menu is located below the image, with links for "Home", "About This Site", "Research Applications", "Upload Resources", and "Contact Us". The main content area is titled "Home" and contains a welcome message: "Welcome to TREAD (The Research Ethics Application Database), an open access, online repository of Research Ethics Committee (REC) application forms and consent statements. TREAD is hosted jointly (from December 2016) by The Global Health Network and the Social Research Association. We welcome those who would like to read how researchers have articulated ethical principles in their subject area or methodology; and invite researchers to contribute to the resource and submit their own examples of application forms and consent statements." Below this, there are two lines of text: "To access TREAD applications, first read the TREAD members Code of Practice." and "To contribute your ethics application documentation click here." The page is divided into three columns. The left column is titled "News" and features a section for "TREAD - The Research Ethics Application Database" with a small image and text: "TREAD, an open access repository of Research Ethics Committee (REC) application". The middle column is titled "FEATURED" and shows a graphic of colorful gears with the word "justice" on one of them. The right column is titled "Tweets by @GlobalReviewers" and displays a tweet from "Global Reviewers @GlobalReviewers" that says "Are you a post-doc early career researcher who would like to visit the Ethical Contract Office".

It is hosted jointly by The Global Health Network and the Social Research Association. It is an open access, online repository of Research Ethics Committee (REC) application forms and consent statements. Scholars need to fill one online form in order to submit their articles and the consent statements. On the top of the webpage, there are options such as Home, About this site, research application, upload resources, contact us. Home webpage also contains columns such as news, e-learning and featured news. Researchers have to confirm that they own this work or have permission to use and share in this way all material included in the research application. On the right side of the web page, they have placed twitter column which depicts recent tweets on their tweeter handle.

6) University of Winchester's Institutional Repository:

url: <http://repository.winchester.ac.uk/>

University of Winchester's Institutional Repository showcases the excellent research undertaken across the University. It has collaboration with 32 of universities of 26 countries across the world. Within those collaborations, there are two collaboration from India; Karnataka University, Dharwad and Christ University, Bengaluru. It is called 'Pure' and it includes features which benefit everyone including full text search, browse and filter by content type or specialty, and bookmark-friendly content. Pure features a simple, flexible, and consistent user interface design. They provide content in a number of different formats, including HTML and PDF. It classifies its content into Research Units (it lists down various departments across the collaborating universities, Institutes), Research Outputs (Title of the paper, name of the authors, Date, Journal Name, volume and issue number, volume and issue number, open access: Yes/No, link to the file, How many readers, social media analysis: no. of tweets etc), altmetric for analysis, Projects (Title, author, start and end date, type of the project (individual or institutional grant)), prizes, activities (Talk, seminar etc). Search option contains filters like type (anthology, article, Book), language, publication year, authors, research units, collaborators, open access. Pages are well structured with headings, and lists which allow users of assistive technology to easily jump around pages and understand content.

University of Winchester Research Portal

Welcome to the University of Winchester's Institutional Repository which showcases the excellent research undertaken across the University.

The Repository enables open access to outputs where permitted, and full citation details where restrictions apply, making our research accessible worldwide through a searchable, browse-able database. New items are being added all the time.

For further information about the Repository, please contact repository@winchester.ac.uk

Collaborations within the past 5 years.

Click dots and donuts to bring up details.

A world map visualization showing research collaborations. Numerous purple dots of varying sizes are scattered across the map, with a dense cluster in Europe. Lines connect these dots, representing collaborative networks. A specific dot in India is highlighted with a black box labeled 'India'.

Pages employ ARIA (Accessibility for Rich Internet Applications) to enhance navigation, orientation and labeling for users of screen readers and other assistive technology. All books and journals are available as PDFs with searchable text. Pages include a visible skip navigation link to skip repetitive elements. It is accessible for only university students.

7) Council of Scientific and Industrial Research (CSIR) Repository:

url: <http://eprints.csirexplorations.com/>

It is an open access repository of Indian theses by Council of Scientific and Industrial Research (India). This site is powered by EPrints 3, free software developed by the University of Southampton. The search options are classified by year, subject, institute and author. Advance search contains keyword and order of the result (year, author and title option). This e-repository is currently partially operational.
